

## CASE STUDY: SEMI-PERMANENT GRANDSTAND AND RAILING

### Purcell Pavilion at the Joyce Center University of Notre Dame South Bend, IN

During the 2009 off-season, the Purcell Pavilion at the Joyce Center, University of Notre Dame, underwent a major renovation — and Staging Concepts played a major role in the project. Staging Concepts custom designed, manufactured and installed over 27,000 square feet of Semi-Permanent Grandstand seating area with more than 5,000 feet of Railing.

The upper level of the Pavilion formerly had a flat floor with rolling retractable bleachers. After the renovation, the upper level is now made up of 18 sections of Staging Concepts' custom designed Grandstand seating, where fans cheer on the Fighting Irish basketball teams. Each section is interconnected via vomitory infills — also designed, manufactured, and installed by Staging Concepts, Inc.

In addition, Staging Concepts also provided Purcell Pavilion with 12 ADA seating areas, 7,500 linear feet of photoluminescent stair nosing, event level seating risers, and aisle rail on the lower level permanent concrete risers.
